

IMPROVING ASSET GOVERNANCE

One of the busiest international airports in the world engaged PK to execute and deploy service asset and configuration management within ServiceNow. This initiative was intended to create a single source of truth for enterprise assets, while improving adherence to several regulatory compliance requirements.

- ▶ Built a strong ITIL foundation to leverage immediately and scale as needed.
- ▶ Created a single source of truth for CIs, assets, and contracts.
- ▶ Enabled cost-effective stewardship of assets, regulatory compliance, and reporting and messaging.

”

Thanks to PK, our workflows are much more streamlined and complying with regulations is simple.
